

## Ask Julie Ryan - Tom Paladino Transcript

0:00:01 - Anncr

Julie Ryan, noted psychic and medical intuitive, is ready to answer your personal questions, even those you never knew you could ask. For more than 25 years, as she developed and refined her intuitive skills, Julie used her knowledge as a successful inventor and businesswoman to help others. Now she wants to help you to grow, heal and get the answers you've been longing to hear. Do you have a question for someone who's transitioned? Do you have a medical issue? What about your pet's health or behavior? Perhaps you have a loved one who's close to death and you'd like to know what's happening? Are you on the path to fulfill your life's purpose, no matter where you are in the world? Take a journey to the other side and ask Julie Ryan.

0:00:44 - Julie

Hi everybody, today we've got a really interesting fellow on the show. His name is Tom Paladino and he's a scientist who works with scalar energy, and that's the energy that Tesla, Nikola Tesla, founded. And boy do I have a bunch of questions for him. The reason I wanted to have him on the show was I want to ask him about what happens when I'm doing energy healings and my graduates are doing energy healings. What happens when we're communicating with spirit? How can we see deceased loved ones and get all that information? I know it has to do with scalar waves, I just don't know how.

So I hope you enjoy the conversation. I'm looking forward to it myself, and I think we all can learn something. Remember to like and subscribe and share the show with your friends and family, and remember to leave a comment. We'd love to hear your thoughts on topics that we're talking about and other things that you'd like for us to discuss. We will try and get some of those guests on the show as well, so let's go ahead and start the conversation with Tom. Hi, Tom, thanks so much for taking the time to join us today. Thank you for the invite, Julie. Thanks, I am fascinated by what you do, and I have a whole bunch of questions for you, so let's just get right to it. What is scalar energy?

0:02:13 - Tom

I work with scalar energy instruments. What is scalar energy? The initial energy of the universe? What do I mean by that? If you look at the universe, where does the light come from? The sun and the stars? What's the driving force? What's the animating force of the sun and the stars? Scalar energy, it's not electricity. So I am working with the primal force of the universe scalar energy, scalar light. Why is that important? That's the first principle. That's the instructions. That sets the universe in motion. This is the animating force.

0:02:52 - Julie

All right, so explain that a little further. That's the energy that sets everything in motion. Let's tear that apart.

0:03:01 - Tom

Let's break that down a little bit, well if you're looking at this from a scientific perspective, everything has a cause and effect. What am I saying? Scalar energy, light is fundamental. Nothing precedes light. It's fundamental. So light, the instructions from light, are the cause of aspects in nature, are the cause of spiritual, cognitive, emotional behavior, are the cause of physical action. So I'm working with a primal force, energy, light. That light is responsible for all phenomenon in the universe and I stand by that statement because there's nothing that precedes light.

0:03:46 - Julie

And where does light originate?

0:03:48 - Tom

From God. My estimation has to be from God.

0:03:52 - Julie

Okay, why do you say it has to be from God?

0:03:54 - Tom

Well, god is uncreated, so you have to have something that created the universe, and that has to be an uncreated being. Otherwise then you have to say well, how was God created? So, if you go back to the first cause, eventually it has to come from an uncreated being.

0:04:16 - Julie

And some people refer to God as source and a lot of different names. Does that resonate with you, the source term?

0:04:24 - Tom

It does, and I'll tell you why Because there has to be a source of everything. If not, then what preceded that source? So if God is the fountainhead, the source, the beginning of all, then yes, that's accurate.

0:04:39 - Julie

Does it work the same with different solar systems, like it seems to in this solar system? Does every solar system have the same energy?

0:04:49 - Tom

Yes, yes, and I'll tell you why. Even astrophysicists have looked at various stars, and at the very core of a star, it's a plasma field. It's pure energy. There's no physical mass. That's what skater energy is. So, whether it's a nearby galaxy or a distant galaxy, we see the same phenomenon. And what am I getting at? A plasma field, chi prana, consciousness, scalar energy. This is the non-physical light that I work with. A plasma field, what some people call consciousness. Again, this is so important because once we wrap our head around this and we understand that we can now control this plasma field or consciousness, we'll make great advances.

0:05:38 - Julie

All right, I got whole body goosebumps when you talked about that. It's a plasma field. Here's why I learned how to be a medical, intuitive and psychic medium, and I teach people all over the world how to do this and I'm helping a person transition when they're dying. We do this exercise called the walk to heaven for those that are very afraid to die, and it's a lot of people are afraid to die because we've all been taught you're either going to go to heaven or you're going to burn in hell for eternity at least those of us in the Western world. One of that walk to heaven is my perception of the pearly gates is a big, huge, brilliant, whitish, yellowish plasma wall, tom, and we go through it with our spirit and it closes up and there's no trace and when we come back out of it it's the same thing. I have never heard anybody describe energy as pure plasma before, but it makes total sense to me that that's what I'm seeing. That's huge.

0:06:47 - Tom

It is. You're quite intuitive. So what is our point? The energy of heaven, the light of heaven, is a plasma field. It's not electricity. There's two energies plasma, scalar and electromagnetic. Let's leave electromagnetic energy to the side. Why it's inferior. It produces entropy, it dies off, it weakens over distance. I don't want that in heaven, do you no? What do you want? You want pure white light in heaven. So if I were to describe scalar energy, it's a vortex, it's a double

helix. Now this will resonate with you, I'm sure. When people die, they go into the vortex. It's a spinning tunnel of white light. What is scalar energy? It's a spinning tunnel of white light, much like this instrument. It's so strong it can produce white light. If I shine it in the vicinity of the instrument, that light bulb is lighting up under a plasma influence. Look how white that light is. So this, if you will, is a miniature star. This is a miniature heaven, and with this plasma field I can manipulate nature. I can work hand in hand with nature.

0:08:09 - Julie

Well, to your point about when somebody is dying, I have coined what I call the 12 faces of transition, which is how everybody's surrounded by angels and the spirits of deceased loved ones and pets as they're transitioning. And what they do is there is a vortex formed above their head as they're dying, and I can feel it, I can see it, I can hear it, and the spirit and the body separate as the spirit goes through that vortex, and that's what ND ears describe near-death experience. I see it in the 12 faces of transition, and so do all of my graduates of my training. We can scan somebody anywhere in the world telepathically, and when that vortex forms, we know they're getting closer and closer to passing so interesting.

I laugh about the plasma wall in heaven, though, because 12 years of Catholic schools, you know I'm thinking okay, say, Peter's sitting out front of this stone wall with a clipboard going okay, you're allowed in. Nope, you got to go burn for eternity. And that's not what I perceive. But it's so interesting when we go through the plasma wall, all of the person who's dying, all their deceased loved ones spirits, are there waiting for them in their pets. And then we come and this walk to heaven is addressed for rehearsal. Now we come back out through the plasma wall and what do we do? We go in a black hole. So I want to talk to you about that. In this walk to heaven, we go through this black hole and it has a pull to it, depending on which direction we're going.

The other thing I want to mention is the movie that I refer to a lot with this plasma wall is the movie Contact with Jodi Foster from the late 80s or early 90s. And when she's on a different planet, the alien that comes to greet her is all plasma, the scene is all plasma, she touches it and it's a plasma material. What are your thoughts about those two things?

0:10:13 - Tom

Yeah, I would say that once we're glorified in heaven, we have glorified bodies which are essentially plasma bodies or skitter like beings. I firmly believe that we were designed to be skitter like beings. I firmly believe that Adam and Eve had the gift of skitter light and that they lost it in the Garden of Eden. So what am I getting at? I want to return to the Garden of Eden. I want to return to perfection. I want people to be, if you will, pure white light. Yes, we still have a physical body, but we could have a glorified body, and this is mentioned the Bible, this is mentioned by various philosophies around the world. And why is that possible? Because of light. Energy is fundamental. We don't do this by way of chemicals, we do this by way of light. Only light is fundamental. Only light can produce that fundamental change.

0:11:14 - Julie

Okay, well, you're even more fascinating than I thought you were going to be, and we're just getting started here. I got pages of questions for you. What did Nikola Tesla discover? Did he discover scalar energy, and did Edison really keep him from progressing with it? What's behind that whole story? Is that true, or has that just been embellished throughout the years?

0:11:40 - Tom

Many ways. That's true. Tesla began his career as an electrical engineer. He really gave us AC electricity. He gave us the modern day age here in his life. Tesla saw that there was scalar energy, free energy from the sun and the stars. So Tesla started to transition from AC electricity to the free energy of the stars. However, at that time, the ruling elite wanted to work with

Edison because they could make money off of electricity. You cannot make as much money off of free energy. That that's what Tesla wanted, you with me. So that was the real divide. And from that point forward, the money, the bankers, followed Edison so that they could meter electricity AC electricity, so that they could control that industry. Now, if we would have used scalar energy, free energy, there's no way somebody can control this. I can broadcast this energy anywhere in the world by way of these instruments. So you're right, there was quite a division later on amongst Tesla and Edison. Tesla is always the superior electrician, he's always the superior theoretician, but the money people sided with Edison to make money.

0:13:02 - Julie

Okay, that's a gentler kinder version from what I heard. What I heard was Edison basically bankrupted him and said no, you can't work with me and prevented him from utilizing some of his technology and things like that.

0:13:24 - Tom

There was a time later in life that Tesla built a free energy tower in Long Island, New York. He called it Wardencliff, and JP Morgan for the time being was financing that he was interested in it, but ultimately JP Morgan and the Rothschilds understood that this was a free energy tower and they did not want to finance free energy instruments anymore. That was anathema to them. So, moving forward, JP Morgan and the Rothschilds withdrew all the funding from Tesla and Tesla was essentially impoverished. He could not work without any type of government backing or some type of backing from bankers. That's the more accurate and the more cutting remark that I can make about how the Illuminati controlled this.

0:14:13 - Julie

Yeah, interesting, all right. So what led you to study this stuff? Do you come from a family of astrophysicists or something? What's the funnest? One get interested in Scale or energy. What's been your journey to get you to this place?

0:14:28 - Tom

As a youngster, I read about Nikola Tesla and I have this ability to understand abstraction. In many ways, I'm a mystic and I could understand what Tesla was working with. Many times, Tesla would say in his notes that he could switch on the sun and switch off the sun. Well, what does he mean by that? It means he could control the energy of the sun, scalar energy and he did indeed invent towers, scalar energy towers or scalar energy instruments. I knew that even as a youngster when I was reading Tesla. So I said to myself this is fascinating and Tesla had introduced to the world the answer to our energy problems. Now just picture this, Julie Free energy from the sun and the stars. You can broadcast it anywhere, so you don't need an infrastructure. There's no pollution because there's no chemicals. There's nothing to go wrong. Why didn't we use this free energy device that Tesla invented? Well, for some of the reasons that we've already observed, I understood Tesla as a youngster and I said to myself I'm going to follow in his footsteps, and today I am following in his footsteps.

0:15:38 - Julie

So what did you study electrical engineering in school, or what gave you the basis? Or have you just been self-taught on all of this stuff I had?

0:15:47 - Tom

a great academic career and I spent many years at the university level, but at age 34 or 35, I decided to do this on my own, and it's all self-taught. God gave me the wisdom from that point forward. Why do I say that? It's not taught by academia? And, quite frankly, this is suppressed. This is suppressed technology. This is a suppressed topic. The powers that be do not want you to realize that there are free energy opportunities. If free energy was to make its way onto the center stage of the world, it would upset the economic order. I can guarantee you, the world

would change, and change quite quickly. Well, the powers that be do not want us to know that. So we have to be self-taught, we have to do this alone, and that's what I've been doing for the past 30 years. I've been trying to understand this energy and to bring forth a prototype, a working model, and I've achieved that finally.

0:16:47 - Julie

Okay, well, I want you to show us some of your equipment and what it can do here in a little bit, but I got a few other questions to get us to that point. Are scalar energy and the Schumann resonance connected? Are they the same thing?

0:17:08 - Tom

They're both different because the Schumann resonance is measured by electromagnetic frequency, but the Schumann resonance surrounds the Earth and ultimately scalar energy will cause any type of electromagnetic manifestations. What am I saying? The first energy, the primary energy, is always scalar, and that it downgrades, or derivative of that, is the electromagnetic spectrum. So the Schumann resonance is a derivative of scalar energy. Now, interestingly, as you know, the Schumann resonance is always with us here on planet Earth. It has been fluctuating recently, but nonetheless, what powers the Schumann resonance? It's powered by the sun and the stars. The Schumann resonance is just a step down order of scalar energy.

0:17:58 - Julie

Do lightning strikes that are grounded into the core of the Earth affect the Schumann resonance?

0:18:04 - Tom

Yes, they do. Tassel was able to produce lightning bolts at his Colorado Springs installation. He was able, with Schumann energy, to create lightning bolts. So what's the point? A lightning bolt carries instructions, not only a great deal of energy. But Tassel said that those lightning bolts, throughout the world you have lightning storms, what they call electrical storms, and those storms power the Earth, including the Schumann resonance. Many times now I live in Florida. Many times this instrument will start to spark and produce a little miniature lightning bolt during electrical storms here in Florida. Meaning my instrument is a miniature, produces miniature lightning bolts, lightning arcs, if you will, because it coincides, it's communicating with the atmosphere.

So yes, a lightning strike really is first and foremost a download of scalar energy. All lightning initiates a scalar energy and then a lightning will degrade into electricity and magnitude any type of magnetism. The point is this if you look at a lightning strike, some people who are struck by lightning survive and they just have a, if you will, a download of energy. Others are struck by lightning and by that time the lightning is already downgraded into electricity and magnetism and they're they're almost vaporized, they're electrocuted on the spot. So why do we have these two different outcomes when people are struck by lightning. If lightning is still in its plasma state and its scheter energy state and will just pass through you, it'll really be a download of intelligence. If that lightning strike has already downloaded and converted into electricity and magnetism, then you will be electrocuted on the spot.

0:20:02 - Julie

All right. Why I'm so fascinated in this, with the scalar waves and the Schumann resonance and all of that is I do a lot of energy healing with people all over the world, and so do all my graduates of my classes, and we connect into them remotely, telepathically, and I'm like a human MRI. I can see broken bones, torn legaments, viral infections, bacterial infections in my mind's eye. I teach to my students you want to envision energy coming from the core of the

earth and shooting up out the top of your head. That gets you in the same frequency as spirit. Where did I get that? I got that from reading Tesla.

Tesla says the Schumann resonance is the same as spirit. That lets us connect. And I'll connect to something and say, okay, you got a tumor on your liver and here's where it is. And they'll say, yeah, how do you know that? Well, I'm seeing it in my mind's eye, so that makes sense to me, with that being downgraded plasma. This is the first time I've ever dissected this. I love it when science catches up with who has been around all along with science.

Right. So the plasma is downgraded. So see if I'm following this correctly, the plasma is downgraded enough so that the human body can have it come through us to get to the same level as spirit, so we're able to do this remote healing and remote communication. Does that make sense?

0:21:36 - Tom

It does, and that proves that there's two energies scalar energy, the primary energy, electricity, magnetism, the secondary energy. By the way, scalar energy and electricity, or can convert either way. So it's if you will. You can either convert electricity back into scalar or scalar into electromagnetic. So it shows a bidirectional conversion, showing just how friendly these energies are in exchange. It's quite fascinating, you know, if we, if we have this download of scalar energy into electricity without any explosion or undue amount of heat or any type of or any type of evaporation. It is rather benign, it's if you will, it's invisible to us. This happens all, all the time, throughout the universe. So this shows you how seamless nature is to convert scalar to electromagnetic or vice versa, from electromagnetic to scalar.

0:22:38 - Julie

So when I'm working on a healing with somebody in Dubai took to somebody in Dubai recently I am I using scalar energy because my body can tolerate it, versus electricity because my body wouldn't be able to tolerate it Most likely, most likely, you're in the plasmacy.

And when I see the spirit of a deceased loved one and I say, okay, your grandma's next to you. She's got white hair, it's in a bun, she's wearing a sweater with pearl buttons going up the front, that's a hologram of what grandma's looking like, so that they can understand that that's grandma, because I just described her. Is that plasma as well?

0:23:21 - Tom

Yes, Now we understand when people say the universe has to be holographic because it has to communicate with itself. So you're right. So whether you're in one location, you can still simultaneously be anywhere else in the universe. That's a holographic thought. That's only possible in a plasma ideation. You cannot be in two places at once. In a electromagnetic spectrum, For instance, if you're, if this universe was entirely electromagnetic, you have the option of either being in California or New York. You can't be in both simultaneously. In a plasma state, you can transcend time. You could be in both California and New York simultaneously. So this is the two natures of nature, the two energies. Plasma, you transcend time and space.

0:24:12 - Julie

Well, and we're able to tap into that and everybody, everybody as far as I'm concerned, spend my experience that everybody has the ability to do this. It's a matter of developing and enhancing it. And, furthermore, there are some people that believe that we live multiple lifetimes concurrently. And back to the plasma thing with past lives. I can see what somebody's past life is like, tell you where it was, when it was, what they were doing, what their name was, all this stuff that we can corroborate with historic documents. So I'm in the plasma field watching a movie, basically, and a plasma field that's happening concurrently with

this reality. Is that all? Does that all register with you too, with that that we live multiple lifetimes concurrently?

0:25:03 - Tom

Let me say, let me prove that scalar energy is real. A thought can transcend time and space, correct? Or our emotion, okay. So you have to have a universe that can accommodate a thought or an emotion. Our mind and our heart are scalar energy vessels. Thinking is scalar energy, feelings are scalar energy. Why? Because a thought, a prayer, intuition, creativity, love and expression of emotion, mercy, compassion, all of those are scalar waves and they transcend time and space in a flash.

So, in order to have a universe to accommodate a thought, you have to have an infinite universe, which is a plasma state, which is a holographic field. The hologram is always infinite. You cannot put the hologram inside a box. You either have an infinite holographic universe or you have no holographic units whatsoever With me. So in order to accommodate an infinite structure, whether it's a transcended number you know there's something like pi, some numbers are transcended, they never end you have to have an infinite universe to describe that transcended number. So, whether it's thoughts which are transcended or mathematical values, pi which is transcended you have to have a matching, corresponding universe, a holographic universe, an infinite universe, so we can contact, we interface with the infinite through the plasma field, through the holographic field.

0:26:46 - Julie

Well, I agree with that, because and I teach this and I do it all the time who do you want to talk to? That's deceased, you're dead grandma. You want to talk to Elvis? You want to talk to Napoleon? It doesn't matter whether you know him or not, you think of them. That connects your satellite dish head to their frequency, opens a two-way radio communication and you can communicate with them. And we have access to universal intelligence. But I've never thought of it before as being through the plasma field. But it makes total sense to me. You're brilliant.

0:27:18 - Tom

God bless you Likewise. Why? Because it has to be non-physical. You see, when you're in the electromagnetic force field, you're still flesh and bones. Once you go into the non-physical, which is a plasma field, a skin energy force field, you lose all your physical constraints, you become spirit-like. So cogitate upon that, and now I'm going to offer this example. Have you ever heard of the Philadelphia experiment?

0:27:47 - Julie

Yes. But, tell everybody what it is All right.

0:27:51 - Tom

There was a test by the United States Navy with a ship, an actual battleship, by the name of the Eldridge, and it purportedly it was a scalar energy test in which subjecting this battleship to so much scalar wave, so much scalar information, that a green halo developed around the ship and the ship teleported from Philadelphia back to Roanoke, somewhere in Virginia.

Now the point is this If this was true and it seems to be substantiated by some people that the ship, a battleship, in an instant teleported from Philadelphia, Pennsylvania, back to Virginia, now, during this teleportation, the sailors mentioned that under this plasma field, they could walk through the hull of the ship. The sailors who were on the Eldridge said that they became plasma-like under the influence of scalar energy and they could walk actually through the ship without any impediment. Now, sadly, as the experiment ended, the plasma fields subsided and some of the sailors who were walking through the hull of the ship became enmeshed or, if you will, fused into the hull of the ship. The aftermath was, on account of the ending of the

Siladelpi experiment, some of the sailors were fused into the hull of the ship of the Eldridge. Is that true? Well, if it is true, it fits to the definition of a plasma field, the existence of a plasma field and the cessation of a plasma field, to the point where the sailors became infused, embedded into the hull of the ship.

0:29:52 - Julie

Okay, back to the healing thing. You got my mind percolating on this thing. I watch stem cell energy get used to generate new organs at times that show up on subsequent scans and it freaks out the docks. It's hilarious when that happens and I've gotten calls over the years, tom, saying what the heck are you doing and how does this stuff work? So I see, you know I'm a manufacturer. I was a manufacturer of surgical devices.

I see a mold like a blow mold or an injection mold or a Jell-O mold, for that matter, in the shape of a kidney. I watch stem cell energy, which is a light amber color gel like a plasma. I never thought about it before. It has sparkles in it. You got to have sparkles in it because it's woo-woo right, and it reminds me of this hair gel when I was a kid called Dippity-Doo, and so I watch that get formed, I watch that go into the mold and then there's always a vortex spinning above the mold that transforms the stem cell energy into the new body part, and then, 30 years of being in and out of surgery, I watch the new organ replace the one that's been removed.

I see that all the time the stem cell energy is used to heal all body parts. It's amazing. So what is happening with that? I've never thought about it from a plasma standpoint, but I see it happen multiple times a day. It gets used with clients and the results are very conclusive when they go back to see the doctors. What do you believe is going on in that instance?

0:31:31 - Tom

You've heard, mind over matter. Why? Because the mind is a scalar wave. The mind can dictate reality. The mind will eventually produce reality, physical reality.

Now, whether it's a medical miracle or whether it's some type of intuition that you have, I can guarantee the first principle. The first cause is always scalar energy and the vortex is indicative of a scalar wave. Now can I prove that, at least in theory? Look at our DNA. It has a major groove and a minor groove and it's a helix, right? Well, some people have photographed a scalar wave and it's a double helix. Yes, and it also has a major groove and a minor groove, meaning what that scalar energy is the motif, with a major groove and a minor groove, to download into our DNA, to create and maintain DNA, with its incumbent major groove and minor groove. Meaning what Our DNA is a standing scalar wave that serves as the instructions for our body. So we, as physical human beings, have a download of double helix light, scalar energy that creates our DNA, and then the DNA creates the genes and the proteins. And what do you have? You have a living organism, but it always starts with the double helix scalar energy.

0:33:03 - Julie

Two points on that. Number one I watch DNA healings all the time, where I watch the nucleic acids, the ATCGs, get re-sequenced to go back to a normal recipe, especially with cancer patients, because I can see the mutation in the DNA and I watch it go back in energetic healing. Number one and number two as far as the stem cell energy and the scalar waves, I go back to seventh grade biology. We all learned every cell as a nucleus, every nucleus is surrounded by cytoplasm. What's cytoplasm? It's like did, but he do, it's like what I'm seeing happening right, and there's a centrifugal force in the body that causes the cells to divide and replicate to the tune of billions of them a day. I've read that our GI tract is all new cells every three days. So I believe when I'm watching these stem cell healings, I believe it's spirit working through me and with me to help facilitate healing. Number one, but number two I believe what

I'm watching in warp speed is what the body does on its own every day, all day long. Does that make sense to you Exactly?

0:34:16 - Tom

We are costly receiving that energy from the sun and the stars. And what some people have achieved by healing hands healing hands or scalar energy hands, or some people can heal by voice or by thought or by prayer, prayer is once again a scalar wave. This always goes back to the first principle, the first cause the energy, not electricity. Electricity is a derivative. So now we understand the wheel work of nature, which is non physical instruction, the plasma field, product consciousness. Can you measure consciousness? No, is consciousness physical? No, it has to be non physical, it's intelligence.

0:35:00 - Julie

I've been fascinated recently on the H3 mining supposedly that they're trying to figure out how to do that on the moon, but they haven't figured out yet the scientists is how to not only harvest it, get it back to earth and then come up with that. So explain a little bit about H3. Is H3 a component of scalar energy or is it something totally different?

0:35:28 - Tom

Everything receives instructions from scalar energy. So, no matter what element it is, what isotopic form, everything receives instructions. Some people call that the geometry of the universe. What provides those geometric expressions, that geometric intelligence? Scalar energy. And that's a great point I'm going to hold up. For instance, when I work with people and I'm working with, let's say, riboflavin, I can download riboflavin into a person by way of a photograph of riboflavin and the upshot is the hydrogen, the oxygen and the carbon in their body assumes a geometric form, that form. So this instrument can download the white light of riboflavin into the plasma field and the instructions are to create that molecular structure, that molecular formula, if you will, of riboflavin. So yes, those are the instructions of scalar energy.

0:36:36 - Julie

Explain what riboflavin is. I think most people have heard of it, but explain what it is.

0:36:41 - Tom

It's one of the B-complex vitamins. This is B2. The reason I'm holding up a photograph I work with photographs of people. If I place my photograph close to riboflavin inside the instrument, there's a download of plasma fields. The information of riboflavin vitamin B2, enters into my plasma field or my aura and I start to assemble energetically riboflavin. It's not a chemical process. It's a download of plasma energy. I receive my nutrients every day from plasma, from scalar energy instructions. I don't take a multivitamin pill. I receive my B-complex vitamins from plasma energy.

0:37:31 - Julie

One of my graduates of my Angelic Tenant Training class has opened a center and they've bought a bunch of med beds. I don't know that it uses scalar energy. My guess is it probably does, but it has the capacity to heal the human body in ways that our western medicine has not been successful in doing so far.

0:37:58 - Tom

Let me and I'm not picking on anybody, but let's look at the pharmaceutical industry. A chemical, what is the chemical? It's not fundamental. It's bound by certain chemical properties and it can only perform so many functions. As opposed to light, which is non-physical instructions, it never has any chemical die off. There's never any chemical imbalance. What would you prefer to use? I prefer to use plasma. I prefer to use scalar energy rather than chemicals. Now I'm speaking for my person. I prefer to work with quantum wellness, energetic

wellness, plasma wellness, as opposed to chemical wellness. Everybody has their proclivity. This is my proclivity to work with energy instruments.

0:38:47 - Julie

Because you understand them and you've been studying them for all these years. How do you get that information Short of having conversations like this? How do you get that information out there? People, when they come to me or come to graduates of my training, they're at their wits end. They've been to 30 doctors and everybody's given them a different diagnosis and a different treatment plan, and they still have the same symptoms. How do we get the word out short of conversations like this, as I mentioned? And what are you up against? Because the medical industry in the US is the third biggest monetary piece of the GDP?

0:39:34 - Tom

You're absolutely right. How do I get the word out? Through podcasts and, frankly, only podcasts are really amenable to working with me. I don't think the major news networks would ever give me the time of day because essentially what I'm doing is going to upset the economic order. Free energy will upset the way we live. It will change the way we live. So I face the same hurdles that other skin energy researchers have faced. Nobody wants to see a free energy instrument brought to market.

0:40:12 - Julie

Two questions on that. Number one is it accessible for people to use this energy? Now you know we hear such a push on solar energy and wind energy and all that kind of stuff. That's number one. Number two what other uses are there for scalar energy instead of just powering our homes? And certainly I believe it's part of the healing equation. I believe it's complementary to the other forms of medicine that we have available.

0:40:41 - Tom

Well, let's look at everything that electricity does today. Granted scalar energy could do everything that electricity does at much, at a reduced rate, reduced price, much safer environment without any pollution, and it's renewable energy. It's energy from the sun and the stars, so you would never run out of skin or energy. So you see yourself. Why aren't we replacing this old guard technology, the military industrial complex, with this new invention, power speed? Don't want it. It will upset the output card.

0:41:19 - Julie

Is it possible to power your home or to power a building or to power a manufacturing plant at this point with scalar energy, or has the technology not advanced enough to be able to harness it into a way that it'll produce electricity?

0:41:34 - Tom

Yeah, I've not been able to advance it to that point, but let me make this clear If I can illuminate a light bulb locally, then the time is coming that I should be able to send this energy out of distance and illuminate a light bulb a thousand miles away. If I can do that, then I've demonstrated universal lighting. Okay, Julie, universal lighting without the need for satellites and substations and telephone wires, etc. So that will be the beginning of the end of the energy crisis to provide illumination anywhere in the world through one device.

0:42:10 - Julie

Okay, back to the hull of the ship being covered in plasma and all of that. There's kind of a, it seems. In the past six months or so in the mainstream media there's been lots of talk about UFOs and alien space vehicles and stuff like that and how they'll be present and visible, and then within a nanosecond, they're not. Is that something that you believe has been used by

ancient cultures, by other civilizations, by other planets? Is it more advanced? Is it less advanced? Is it just different?

0:42:56 - Tom

Let me speak of this term in general unidentified slime objects, UFOs. Many people say that they can see a UFO accelerating and de-accelerate at an excessive speed. Why? Because they're not subject to gravity. Scale energy allows you to overcome gravity. Scale energy is the cause of gravity and if you have a scale energy platform, a flying saucer, you can reduce gravity, nullify gravity, so you can accelerate and de-accelerate quickly. There's no G-forces. It's sort of like a local environment of anti-gravity.

You've seen some UFOs traverse the sky and then make a 90 degree angle, turn at thousands of miles per hour and there's no shear to that craft. There's nothing seems to happen that would compromise that craft. Why? It's a plasma craft, it's non-physical and you're working in a scalar energy environment which is anti-gravity. So you're not subject to the normal electromagnetic laws. And this is what we have to start understanding when you see a UFO and it behaves outside of the laws of science, so to speak. Those are the laws of Newtonian science, electromagnetic science, Though they're still being laws. The laws that the unidentified flying object is a thing are scalar laws, plasma laws.

0:44:31 - Julie

Does that correlate to with ancient civilizations like that built the pyramids and stuff like that? How in the heck did they get those massive boulders and stack them up when they didn't have anywhere near the technology that we have in the form of equipment? But how did that work? Were they accessing plasma back then, the scalar energy?

0:44:55 - Tom

Yes, they had to. And if you look at many of the pyramids, some of the, if you will, inside the pyramids, some of those structures could only have been erected with some type of anti-gravity fixture. You can't put a crane inside a pyramid and lift something up. There's no room for the crane. So what's the point? Many structures, pyramids, even obelisks, really speak to the fact that either angels or demons built those pyramids and those obelisks. You cannot have done that. That could not have been accomplished by people back in the day, by human beings. We didn't have that technology.

0:45:38 - Julie

Well, interesting point too about the pyramids is I know that there are pyramids all over the world, even in America. Most of us are not aware of them, but I know there are pyramids here and they're in every culture and all in pretty much every country too. But several of them have what are known as healing chambers in the bottom of them and a lot of those still have running streams that go through the bottom of them, and there are reports of people with cancer or with high blood pressure or with diabetes or whatever, and they go down into the bowels of the pyramid, if you will, and they're down there for a period of time, maybe an hour or two, and they come back and everything's normalized. What do you believe is going on in that situation? And is water necessary? Is water like a rocket booster fuel or something for the scalar energy? Does it have something to do with conductivity of the scalar waves?

0:46:45 - Tom

Many obelisks and many pyramids are passive skater energy capacitors. They will harness and, if you will promote that double helix Now, Tessa purportedly in Wardenclough and his tower in Long Island. One of the reasons why Tessa built that tower in Long Island Sound is because he had ample water close by Long Island Sound. That would serve those geographers, would hopefully power up his scalar energy device. So it appears that, yes, there's water underneath

the pyramids and chyops and there's also a water supply that Tessa had in Long Island at his Wardencllyph tower, the Long Island Sound.

I've always found that water is a natural capacitor. It absorbs scalar energy. It's a great way to store scalar energy. It's pure and that will magnify the signal. Now, anytime you magnify a scalar energy signal, then you're magnifying this download of energy on people and it has been noted and you're right. Some people have ventured into pyramids, some pyramids, and have been cured of cancer and the only common denominator is before these people were not inside a pyramid, they had cancer. After venturing into a pyramid and spending some time inside a pyramid, something happened where they corrected their base pairs and their base pairs were realigned right. There's no longer an addition, deletion or substitution of a base pair and people were cured of cancer, probably by the animating force inside the pyramid, which is inevitably scalar energy.

0:48:27 - Julie

Furthermore, I've seen documentaries on the Bosnian pyramids and the scientist who is over that Bosnian pyramid project talks about how the pyramids are lined up not only in Bosnia but also around the world, from latitude and longitude coordinates, and he postures his hypothesis is that it was some type of an information, they were conducting some kind of information stuff. He said it was like a galactic internet almost, but it seems to me just from this short conversation with you, there was definitely something there, because there's synchronicity with these latitude and longitude coordinates with pyramids all over the world. So there's got to be something there with it. Did they figure out that they were bringing in this scalar energy and they were able to magnify it or harness it by utilizing those coordinates?

0:49:37 - Tom

Yes to all of that. Yes, and this gives credence to what we call lay lines. This gives credence to what some people say is dowsing. A lay line is what? Just a projection, a lot of energy, scalar energy that's emanating from one particular area. If you've ever gone to Sedona, arizona, that's filled with vortexes, scalar energies emanating.

It's so powerful in Sedona that some people can hold a compass in their hand and that compass will not orient, it will not show true north. The needle will just spin. Why, when you're in a scalar energy force field, there is no time and space, so there is a north and south. There is no per se magnetic north. So when you have a compass in Sedona this is an example of a plasma field, a very strong lay line, etc. You cannot orient that compass. That compass will just spin. It's no longer influenced by the electromagnetic force field. The powerful plasma field in Sedona and other places of the world will not allow a compass to actually find true north. That's one indication of how powerful these lay lines are, how powerful some places on the earth are filled with this plasma action, this vortex of scalar energy.

0:51:00 - Julie

I've been to Sedona several times and when I've been there I've scanned it from up on top of a mountain to see what was going on. It looks like a bunch of little vortices down below. It looks like a bunch of little dust devils that are spinning is what I perceive. Furthermore, I live in Birmingham, Alabama, Tom. There's this place here in Birmingham, it's kind of on the outskirts of town, and it's called Gravity Hill.

0:51:26 - Tom

You ever?

0:51:26 - Julie

heard of Gravity Hill. Yeah, tell me. For those of you that don't know what I'm talking about. It's hilarious because I talked to my son and my husband several years ago to go test it out with

me. You come down this hill, you're on a state highway. Put the car at a stop sign. You put the car in neutral. The cars hold back up the hill by some kind of force. We did it three times and of course my husband and son were going. No way do it again. We did it again.

Of course I had to scan it to find out what was going on. I thought is there an Indian burial ground up there or what's going on? There wasn't. There was one further down that I was able to perceive. But there was a vortex of energy at the top of the hill that pulled the car back up the hill at about five miles an hour. Many universities have come to study it and nobody's figured out what's going on. I'm like, call me, I'll help you with that. I could see a vortex and that goes with what you're talking about in Sedona and other places with these vortices of energy. I believe Native indigenous tribes, native Americans and others could perceive that and could feel it. That's where they would build their villages and their camps and put their burial grounds there. In a lot of instances as well, is that been what you found?

0:52:57 - Tom

Yeah, let's just say that we lost so much of this knowledge and many, even the cathedrals of ancient, were able to coalesce to collect this scattered energy. Gravity Hill I've never been there but I want to go there Now. Gravity Hill because of the vortices, because it's a local scattered energy environment. The laws of scattered energy supersede the laws of electromagnetic energy and if there's something that takes place that seems to be outside of the laws of gravity, I understand. The laws of electromagnetic gravity are now suspended in deference for the stronger force field of scattered energy, which can produce, control and manipulate gravity. So it sounds like Gravity Hill is a great example of a vortex. Thank you, and what predominates are the laws of scattered energy, not the electromagnetic laws.

0:53:56 - Julie

Fascinating. Well, if you do a map quest or a Google search or something like that, it's on all of the. You can get directions there. It's on all of them. It's a riot. All right, you've got some pieces of equipment there other than what you just showed us. Is there something else that you want to show us in your lab there?

0:54:18 - Tom

Yeah, there's so many things that these instruments can do. I'm just going to show the audience. I'll show part of the instrument here Now, notably the instrument. There's no moving parts. That's one of the instruments that I use. That's a vacuum tube that allows the pulsation of the scalar wave. What's the point here? These instruments have no moving parts, so it's I can capture the energy. There's no induction motor, there's no armature. That's a scalar energy instrument and then the two coils here that, if you will, if you will, amplifies the energy and broadcast energy. So I can send this energy anywhere in the universe on a flash. Why do I say that? Scalar energy does not observe time and space? So I perform many experiments with these instruments to sort of a time span to share those. But I will say this I've had such great success working with these instruments and this is one of the functions that I've developed and perfected.

Keep in mind there's no human reasoning. The intelligence of plasma field is divine energy. I don't try and overthink this plasma field. I'm going to hold up a Cocksackie B virus, so I'm going to place it right next to my virus. Now, follow my thinking. Energy is found everywhere. This photograph of Cocksackie B can communicate with my photograph. The two communicate plain and simple, and I can download the energy, the intelligence or plasma field of Cocksackie into my photograph and then this instrument will look for the intelligence of the plasma field of Cocksackie and destroy it or bring it to a state of chaos. So by arranging these two photographs inside the instrument, I can nullify the signal of Cocksackie B, bring it to a state of chaos and cease to exist.

0:56:20 - Julie

To take that virus. You take a picture of somebody and a picture of the virus and you put it in a machine that you've engineered and what it does is it gets rid of the virus inside that person's picture. So, from a plasma standpoint, you're connecting to the person through their picture. Yes, correct.

0:56:41 - Tom

Correct. In other words, my photograph is my bilocated version. I bilocate anywhere in the plasma field, so my photograph is me. People don't come to my laboratory. They send their photograph, which is just as good as if they were here in the flesh. And any time I share a photograph with a person's photograph in this case Coxsackie B with my photograph, there's a download of information into my plasma field. This photograph has a signal. If I find that signal in my plasma field, I'll bring that signal to a state of chaos. Coxsackie B ceases to exist. I nullify the signal.

0:57:25 - Julie

Why does it cause chaos If you are putting that picture of that virus over the picture of you and accessing your plasma field? I don't understand that.

0:57:38 - Tom

This instrument is out of phase so it brings to state of chaos, it reduces, it breaks down the molecular bonds with the Coxsackie B virus. So out of phase we'll break down a virus. In phase we'll create a nutrient. So there's different ways we can work with the energy. Inward we'll create a nutrient. Outward, expanding okay, expansive will break down a molecular form. So if we want to create something in phase, we can create any nutrient we want Out of phase. We can break down toxins, we can break down microbes out of phase.

0:58:20 - Julie

It's been my experience in working with thousands of cancer patients that I watched the DNA get healed and I watched it get resequenced. I mentioned that earlier. But it's fascinating as we go forward because, let's say, I talk to somebody maybe once every six weeks, once a quarter, something like that that has cancer. We can stay three steps ahead of cancer. Cancer is crafty. That stuff migrates and mutates and does all these funky things to stay alive. But we can stay three steps ahead of them by redoing the DNA each time. It's been my experience, Tom, and I'd love to hear your thoughts on this.

The first time I'm working with somebody's DNA let's say they're a cancer patient it'll take a little bit of time, maybe a minute, to redo strands of DNA. I will normally see seven strands of DNA come out of an X chromosome. Everybody's got an X Boys, I have an X and a Y and girls have two Xs. But then in subsequent appointments when I'm talking with them and this is all done remotely it'll take maybe a couple of seconds and it's resequenced and it's back into the chromosome. I find it fascinating that the body has already healed it and the cancer is trying to mutate, but then the body's going ah, not so fast and gets it back under control. Certainly that's just one of all the bazillions of variables that come into the healing equation, but it's been really interesting to watch that over the years with cancer patients in particular.

1:00:00 - Tom

Now I frankly think, once we understand scalar energy I'm not trying to be gaunt it should be easy to cure cancer.

1:00:09 - Julie

Yeah, I agree with you. What other uses are there for scalar energy?

1:00:17 - Tom

I've been working with the OHIA tree in Hawaii. Ohia, the OHIA tree had fungus and I have friends in Hawaii who sent me photographs of the OHIA tree. And after I work with the OHIA tree and bring to a state of chaos, that fungus raticists, the OHIA tree responds and none of the trees die and the trees thrive. So I believe that with scalar energy we can address crop failure, blights, if you will, and if you will, it's easy, because you could easily take an aerial photograph and you could photograph an entire farm. You could photograph 10,000, 20,000 trees. Now, keep in mind, I always work with photographs. Photograph by locates the person, the object, the animal to me. So I see that we're going to use this energy in the future and I am now, to a limited extent, with farming, with ranchers. I work with ranchers. They send me photographs of their entire farm livestock pigs, cows, et cetera. I'm working with corporations. People in a corporation will send me hundreds of photographs of corporate employees. It's really unlimited. Jolly well we can do.

1:01:47 - Julie

So do you see a day, as far as the food supply goes, where we'll have like a little receiver device like what you've got there in your lab, and we bring home our groceries from the grocery store and we set them in front of your device or a device like yours, and it just corrects everything before we put it away in the refrigerator at our cabinets?

1:02:12 - Tom

I think that's tenable. Yes, I do. Now, presently, on any given day, I can download through this instrument over 400,000 species of microbes and program anybody's photograph through these 400,000 species of microbes that I have photographs of. So if we can program a photograph of a person, why can't we program a photograph of groceries or a farm field or an orchard?

1:02:44 - Julie

Interesting. How about toxic waste, like nuclear waste from nuclear power plants, and we hear about the oceans being so polluted with mercury and other things like that. Do you have the technology, or can you envision the technology, to negate those problems with the environment?

1:03:10 - Tom

Yes, I believe there will be very strong scalar energy instruments that will go into the atom and stop the spontaneous emission. You have to reprogram this radioactive material and if you stabilize it so it's no longer giving off this radioactivity by correcting the intelligence, will you take something that's radioactive and make it a stable isotope, make it a stable element? Is that possible? Yes, all through instructions. So skin energy should in the future be able to correct a radioactive substance.

1:03:44 - Julie

Yes, how about plastics and things like that that are in the oceans and other waterways? What can scalar energy help with any of that?

1:03:54 - Tom

Help dissolve it and then neutralize it, or perhaps, but you'd need very strong instruments to work upon plastics. Just consider you'd have to take a photograph that's every square meter in the ocean. Is that possible? It's going to be so cost prohibitive. Usually. If we had that technology, you're going to have to photograph every stream, every canal, every reservoir, every beach. That's going to be very difficult.

1:04:28 - Julie

So as a former manufacturer, I'm thinking okay, so you put the device on the manufacturing equipment to negate the toxicity of the bottle of plastics or whatever, before it ever leaves the plant and therefore the water let's say in a plastic water bottle is healthy and the plastic itself has been neutralized. So you do that at the manufacturing process, before it's even left the plant.

1:04:58 - Tom

Yes, and that will revolve around acceptance and then application in this commercial setting. Sky's the limit here, and I'm all for that, Julie. It's first steps. First, though, people have to believe in this, and then, if they do, they have to be willing to allow this technology to replace the existing technology.

1:05:21 - Julie

That's in place. How about running? How about using it instead of fossil fuels or electricity, like in the car batteries? Is that possible today?

1:05:35 - Tom

I mean, we talked about the UFOs utilizing it, but Let me say this Apparently, Tsessele was able to operate a car with scan energy. The story goes that he was a bus and he took out the combustion engine out of a car and with that in mind, the car operated on star power you know with. They really performed rather well under this influence of scan energy, star power. So Tsessele did it. I think we can eventually take out the combustion engine out of our cars and retrofit it so it will work. On this kinetic energy from the stars. The bottom line is you need motion. Well, instead of having a combustion engine provide the kinetic energy, the kinetic energy is from the stars, from the sun. That's the new power plant.

1:06:29 - Julie

You think Elon Musk is working on that with his space exploration and also with his cars, and maybe this battery thing is the first generation of something to get people used to the idea of getting away from fossil fuels?

1:06:45 - Tom

I think he has to. I think he has to because you're still bound by charging a car. Electrical, electrical vehicles are stepping the right direction, but nonetheless, you're still using this grid system that's limited, dangerous and difficult to transport. You know how many EVs power stations are there out there. So ultimately, the future is in free energy from the sun and the stars. If we don't make that move from fossil fuels to free energy, we're not going to advance as a society.

1:07:22 - Julie

Why do you think the ancient civilizations, the Greeks, the Romans, the Egyptians, all of that, a lot of them have disappeared. You know a lot of those very advanced societies back in the day. What do you think happened there?

1:07:40 - Tom

I think ultimately, many civilizations, societies disappear or you see their strength in many ways attenuated because of internal problems, fighting chaos within a society. The society flourishes and will last for millennia. So something went wrong with their society. Something went wrong where they essentially self-annihilated or they moved on.

1:08:06 - Julie

Do you envision a world, eventually, like one that we saw in the Jetsons cartoon as kids, where we see flying vehicles and things like that, all powered with scalar energy?

1:08:20 - Tom

Yes, that's coming. That's coming, we will have. I will see anti-gravity flying instruments within my lifetime. Yes, that's coming.

1:08:32 - Julie

I'm remembering listening to this conversation and talking with you about this. I had a guy call in my show oh gosh, this was pretty early on, I think it was episode 31 and we just did 416 this past week. He wanted to know if he'd been an engineer in a past life. I said, all right, I don't do the hypnotism thing. I do what I call past life scan. I got that he was an electrical engineer and it looked like a set out of Star Wars. They were flying vehicles and there were big towers and everything and he was head of the electrical grid.

I thought, well, this and I even said on the show I said this must be something in the future. I'm thinking, okay, this is some kind of future planet or something. Well, I got to him that the year was 1931. I thought so it was in our linear time. It was almost 100 years ago now. The interesting thing about it was he was in charge of the whole electrical grid using the scalar energy, because I got that it was the sun and the stars that were powering it. When I asked him, I said what kind of engineer are you? He said I'm an electrical engineer. I work at GE and I help build engines for planes. I thought, well, da he was an electrical engineer in that lifetime, he's an electrical engineer using the kind of energy that we've got available today, which I thought was really fun. What you're telling me makes sense to me now, why I was seeing in that past life, what was going on with him and what he was in control of.

1:10:20 - Tom

Yes, yeah, that's the proper term. When you control scalar energy, to some extent, you control nature. Now, once again, going back to my demonstration, a photograph of Kaksaki B provides the information for me to control this virus. I could easily, within a split second, destroy, break down the molecular bonds of that virus. I have dominion over viruses. I mean that. Now, that calls to mind the book of Genesis, when Adam and Eve had dominion over nature. How do you have dominion over nature? Adam and Eve were created perfect. They were scalar light beams. They had dominion over nature because of scalar light. They could control nature.

1:11:09 - Julie

Interesting. What are? Can you give us some examples of clients with whom you've worked, maybe on a medical standpoint or some other that have had positive outcomes in working with you?

1:11:24 - Tom

I'm going to hold up a photograph. This is a group photograph. This is an HIV AIDS clinic in Delhi, India, by the name of Olm Prakash. I've worked with over 5,000 people at Olm Prakash HIV AIDS clinic in Delhi, India. Everybody in this photograph provided me this collage. Everybody has provided me their photograph. Everybody in this collage is now HIV not detectable no detectable viral load. Well, I have test results from this clinic. People buy record that they no longer have no viral load, undetectable viral load for HIV. Everybody at the clinic who's had a follow-up test everybody has no viral load for HIV.

1:12:16 - Julie

Okay, that's impressive. Do you have a couple more you can share?

1:12:21 - Tom

Yeah, going through my notes, I'll briefly go through this. This is another clinic we're working with in Tanzania. I'm just going to show you some of the photographs. Everybody at this clinic at one time was HIV positive in Tanzania. Today, nobody has a viral load in Tanzania. Everybody

from the clinic is saying they returned to work, they're healthy, they no longer have a viral load for HIV. So the only commonality here is that they submitted their photograph to me.

1:12:58 - Julie

Interesting that they're all abroad too. Those two examples. Are they more open to new modalities and a little more desperate, perhaps?

1:13:10 - Tom

Yeah, both. Maybe a third coincidence consideration there's no government over them saying, do this, do that. So they are, yes, open to my work.

1:13:24 - Julie

Wow, Fascinating conversation. Two more questions for you. Number one why do you think we incarnate?

1:13:33 - Tom

Well, everything begins with God. Some people call God source, uncreated being. Why do we incarnate? I think God wants us to be like him. From a Christian standpoint, it's living in God's will. From a metaphysical standpoint, it's being one with source. Why do we incarnate? Because God wants us to be like him. God doesn't not want us to be distant. So we have to take on God's character, so we have to take on his attributes. That's why we have to incarnate in him.

1:14:10 - Julie

Made in the image and likeness of God, but I believe it's in spirit form.

1:14:15 - Tom

I do too. And if we're made in the image of God, then it has to start with light, with energy. So God must be scalar light. That must be his attribute. Why would God use electricity, which has entropy, which has a degradation which shows itself to be inferior? No, god must manifest in scalar light, and that scalar light then incarnates us.

1:14:40 - Julie

All right, I know you have a gift for everybody that's listening. I want to hear about that. And then I want you to let everybody know how they can learn more about you and your work.

1:14:51 - Tom

Obviously, my work is groundbreaking. So how do I prove this? Well, by 15 days of free sessions. Anybody in the world can send in, email us now, your photograph. You can send in photographs of family members. Include your pets a dog, a cat, your birds and your farm animals, and we'll work with you for 15 days. For 15 days we're going to balance your chakras, we're going to eliminate bacteria, we're going to eliminate viruses. That's the second modality. And then the third assemble will create once again vitamins by way of energy. So, chakra balancing, pathogenic cleanse and the nutrient program. For 15 days. We practice that around the clock. The instruments are on 24 hours a day. Visit the website [scalerlight.com](http://scalerlight.com) and then I'll let you prove it to yourself. You decide the advantages of plasma healing.

1:16:01 - Julie

All right. Well, what a far-ranging, fabulous conversation from my viewpoint. I hope everybody listening is just as gobsmacked as I am with all this information. I knew it was going to be fun to talk to you. I didn't realize just how much fun it was going to be. So thanks so much, tom, for taking that time to join us and share some of your brilliance with us, and thanks for the gift to everybody as well. So, everybody, I appreciate you joining us, sending you lots of love from Sweet Home, Alabama, and from Florida too, where Tom is, and we'll see you next time.

1:16:47 - Anncr

Thanks for joining us. Be sure to follow Julie on Instagram and YouTube at Ask Julie Ryan and like her on Facebook at Ask Julie Ryan To schedule an appointment or submit a question. Please visit [AskJulieRyan.com](http://AskJulieRyan.com).
